

USE-CASE FLOW SPECIFICATION

UC-03: Book Video Consultation Slot

Primary Actor: Patient

Supporting Actor: Attending Physician

Goal: Reserve an available video-consultation slot with a verified physician.

Preconditions

The patient is authenticated and has a valid portal account.

At least one verified physician has published an available consultation slot.

Main Success Scenario

1. The patient opens the doctor directory and selects a required specialty.
2. The system displays verified physicians and their available consultation slots.
3. The patient selects a physician and an available date/time slot.
4. The system displays the appointment summary and requests confirmation.
5. The patient confirms the appointment details.
6. The system creates the booking, locks the selected slot, and sends notifications to the patient and physician.
7. Before the appointment window, the system makes an access-controlled consultation-room link available to both participants.

Alternate Flow: Selected Slot Is No Longer Available

1. At confirmation, the system rechecks the selected slot.
2. If another patient has already booked it, no appointment is created.
3. The system explains that the slot is unavailable and displays alternatives.
4. The patient selects another slot and resumes the main flow at Step 3.

Postconditions

Success: A confirmed appointment exists, the slot is locked, and both actors are notified.

Failure: No appointment is created and no consultation-room link is issued.
